Objective

Computer Science graduate with internship experience in front-end development, browser automation, and Chrome extension engineering. Skilled in JavaScript, React.js, Tailwind CSS, Chrome Extension APIs, MySQL, Git, and responsive interface development. Built reusable components, multi-step application workflows, role-based dashboards, and client-side automation features for production applications.

Skills

- **Programming Languages:** Java, JavaScript, SQL
- **Front-End Development:** HTML5, CSS3, React.js, React Router, Tailwind CSS
- **Browser Technologies:** Chrome Extension APIs, localStorage, Browser Automation
- **Database:** MySQL
- **Developer Tools:** Git, GitHub, Vite, VS Code, Vercel
- **Concepts:** Responsive Web Design, Component-Based Development, State Management, Form Validation

Experience

TaskLabs — Software Development Intern

May 2026 – Present

- Developed and enhanced browser automation features for a productivity platform serving more than 1,000 active users.
- Integrated Chrome Extension APIs, including Storage, Runtime Messaging, Tabs, and background service workers, with React.js components to support browser automation workflows.
- Built reusable and responsive interface components for configuring and executing browser-based productivity actions.
- Collaborated with developers and product stakeholders, participated in code reviews, and managed source control through Git and GitHub.

Projects

Career Nexus | [\[GitHub\]](#)

- Developed a placement-management web application with role-based dashboards for students, Training and Placement Officers, and recruiters.
- Built reusable React.js components and responsive interfaces using Tailwind CSS for consistent performance across devices.

Auto Auth | [\[GitHub\]](#)

- Developed Electronic Health Record (EHR) form components with automated data prefill, real-time validation, and submission recommendations, reducing manual data-entry effort by approximately 60%.
- Managed state across multi-step workflows with reliable data binding, error handling, loading indicators, and submission feedback.

Burger Hut | [\[GitHub\]](#)

- Developed a responsive food-ordering website with persistent client-side cart management using React.js and localStorage.
- Implemented navigation with React Router and deployed the application on Vercel through GitHub-based continuous deployment.
